Foreword

WITH THE enactment of the health insurance program for the aged (Medicare), it became possible for the first time to organize a continuing information system to report the use of health care services by older Americans. Since Medicare began one of the basic tasks has been to process and pay claims for covered medical services submitted by or on behalf of the more than 19 million persons entitled to hospital insurance benefits and the 17.7 million persons enrolled for supplementary medical insurance benefits. From this operation come data on the amount, the kind, and the cost of such services used by the aged.

This report is the first in a series of publications designed to disseminate such data on a regular basis. It provides detailed statistical information on the characteristics of persons insured under Medicare. To follow will be other reports in the series detailing information on the number and characteristics of participating providers and on the utilization of medical care services. A listing of these reports appears on page vi. The reports are intended to give a comprehensive account of the amounts reimbursed under the program, the kinds of services paid for,

and the variations in utilization and reimbursement by age, color, and sex of the beneficiary, as well as his place of geographic residence. Such data can provide new insights into the patterns of medical care for persons aged 65 and over. A fuller understanding of present practice can contribute to improved health services not only for the aged but for the general population as well.

Many individuals in the Social Security Administration have assisted with the development of this series. The preparation of these reports is a major function of the ORS Division of Health Insurance Studies, under the supervision of Howard West, director, and Aaron Krute, deputy director, and involving a majority of its staff. Important contributions for the tabulation and presentation of the statistical content of this report were made by Irving Goldstein, Willard P. Hess, and Barbara W. Owens of the Statistical Processing and Procedures Branch of that division. Text preparation was the responsibility of Harry L. Savitt of the Program Statistics Branch. Special acknowledgments for publication services are made to the Division of Operating Facilities in the Office of Administration.

IDA C. MERRIAM,

Assistant Commissioner for Research and Statistics.

DECEMBER 1969

The Statistical System

THIS PUBLICATION is a section of a statistical report series produced from Medicare program records. Presented on a calendar year basis, describing services rendered in the year, the series includes sections on enrollment, characteristics of providers, inpatient hospital care, outpatient hospital services, home health services, physicians' and other medical services, and overall summaries.

The primary objective of these reports is to provide data required to measure and evaluate program operation and effectiveness. Benefit payment operations furnish information about the amount and kind of hospital and medical care services used by persons aged 65 and over, as well as the expenditures for such services. The applications by hospitals, extended care facilities, home health agencies, and independent laboratories to participate in the program provide data on the characteristics of such providers of services. The claim number assigned to each individual serves as the link between the program services utilized and the demographic characteristics of each individual recorded in the health insurance entitlement master file.

The data-collection system has two inherent characteristics that determine the scope, detail, and flexibility of the available data. First, data are collected and maintained on an individual basis so that the beneficiary and his medical experience under the program form the basic unit. Second, records for each bill paid under the program and, for a sample of beneficiaries, records of diagnoses and surgical procedures are maintained on a centralized basis. Except for intermediary operating statistics such as those relating to workloads, costs, and the like, all program statistics are centrally prepared.

THE BASIC RECORDS

The statistical system is based on five related computer-tape records: the health insurance entitlement master file, provider record, hospital insurance (part A) utilization record, medical insurance (part B) payment record, and the record containing information from medical insurance bills for a 5-percent sample of supplementary medical insurance enrollees.

THE HEALTH INSURANCE ENTITLEMENT MASTER FILE

The health insurance entitlement master file identifies each aged person eligible for health insurance benefits and indicates whether he is entitled to hospital benefits, to supplementary medical insurance benefits, or to both of these benefits.

This record is used to create a health insurance card that is sent to each insured person. The card contains the individual's claim number (the number used for OASDI or railroad retirement programs). It indicates the entitlement of the individual for the two parts of the Medicare program.

The entitlement record provides the population data for each part of the program and therefore serves as the base for the computation of a variety of utilization rates, limited only by its demographic content.

PROVIDER RECORD

Every hospital, home health agency, extended care facility, and independent laboratory must apply for participation in the hospital insurance program in order to be reimbursed for services provided. Data included on the application forms have been recorded in the central provider record and are updated as facilities are recertified periodically, as new ones apply for participation, or as some leave the program. When the information in this provider file is combined with utilization data, it serves to relate the characteristics of facilities and agencies that provide care to the kinds and amounts of service used by persons insured under Medicare.

UTILIZATION RECORD FOR HOSPITAL INSURANCE

The administration of the hospital insurance program requires that two items of information be known about each person at the time of his admission to a hospital—his entitlement under the program and the extent to which he has used the benefits available to him under the "benefit period" concept.

When the patient is admitted to a hospital, the admission section of the inpatient hospital admission and billing form is completed by the hospital and forwarded through its intermediary to the Social Security Administration for recording in the central record. As soon as the record is checked, normally in less than 24 hours, the intermediary is informed of the patient's benefit status and of the number of days remaining during the "benefit period."

This information is then forwarded to the hospital. At discharge, the hospital completes the billing section of the form and sends it to the intermediary for payment. When approval for payment has been made, the intermediary forwards the claim to the Social Security Administration for inclusion in the central record.

As part of this process, information on diagnoses and surgical procedures are coded for a 20-percent

of the Medicare Program

sample of beneficiaries based on specific combinations of digits in the health insurance claim number. Copies of admission and billing forms are handled in a comparable manner by home health agencies and extended care facilities. The outpatient billing form is also transmitted to the Social Security Administration for recording in the central record after the bill is approved for payment by the intermediary.

All the information on utilization experience in hospital and extended care facilities that is needed to administer the "benefit period" provision is recorded in the central record. This information includes stays in certain nonparticipating institutions that meet the definition of a hospital or extended care facility under the law, and days of care not covered or reimbursable under the program.

Each admission and billing form contains both the beneficiary's claim number and the provider's identification number. The resulting tape record can be readily matched to the beneficiary files and the provider files. By this process, a statistical tape record is created for the sample of insured persons that contains all the available information needed for tabulation from the three files related to Part A utilization.

PAYMENT FOR MEDICAL INSURANCE

Payment or reimbursement under the SMI program is made only after receipt by the carriers (intermediaries involved in Part B of the Medicare program) of bills having allowed charges exceeding \$50 during a calendar year period.

For the insured population, carriers need to know from a central source that the deductible has been met; thereafter, during the remainder of the calendar year, the only additional information required from the Social Security Administration for reimbursement or payment purposes is whether the person is still enrolled under the SMI program.

For administration and operation of the program, the Social Security Administration must have accurate and complete information on the amounts paid by the carriers for physician services and for other services and supplies under this part of the program. To meet these needs, carriers furnish a payment record consisting of tape, punched card, or other machine-readable record of each bill paid. A "bill" is defined as a request for payment from or on behalf of a beneficiary as the result of services provided by a single physician or supplier.

The payment record also contains selected items of information needed to supply an efficient basis for drawing samples of the bills. These items provide a

sampling frame that may be used to draw additional samples designed to obtain specific information not furnished reliably by the basic sample of enrolled persons under the medical insurance program.

THE MEDICAL INSURANCE SAMPLE

Although the payment record provides a rapid method for summarizing payment data and a sampling frame for efficiently drawing additional samples of bills, it does not provide specific data on diagnoses, procedures, and related charges.

Basic statistics on the utilization of physician and other services covered under the supplementary medical insurance program are derived from bills paid by intermediaries to or on behalf of a continuous 5-percent sample of all enrolled persons. Intermediaries have been given specific combinations of digits of the health insurance claim number to be used in selecting the 5-percent sample, which is a sub-sample of the 20-percent sample used for hospital insurance program data.

Bills are submitted either directly on an SSA request for payment form, or on the SSA form in combination with the physician's billing form. Both methods are designed to provide information on the date and place of each service, the procedure carried out or service provided, the condition treated (diagnosis), and the physician's or supplier's charge for the specific service.

All of the bills of persons in the 5-percent sample to or for whom payment is made under the program, including those used to meet the annual \$50 deductible, are included in the sample and coded. However, data are not available through these procedures for persons in the sample who do not meet the \$50 deductible. Such data are collected by means of the Current Medicare Survey, with data made available in a separate report series.¹

For hospital-based physicians who have authorized the provider to collect the fee for their services, the provider billing for patient services by physicians form is used. This form is completed for each patient. It includes descriptive information on the date and place of each service, the diagnoses, procedures, and the charges. These bills are received centrally for the 5-percent sample of persons enrolled for supplementary medical insurance.

Notes	2-1
2.1 Persons enrolled as of July 1, for hospital and medical insurance, for all areas and United States, by age, color, and sex	2-2
2.2 Persons enrolled after July 1, for hospital and medical insurance, by age, color, sex, and month coverage began	2-3
2.3 Persons whose hospital and medical insurance was terminated, by age, color, sex, and month coverage ended	2-5
2.4 Persons enrolled as of October 1, for hospital and medical insurance, by age, color, and sex, for the United States, by region and division of residence	2-7
2.5 Persons enrolled as of October 1, for hospital and medical insurance, by age, color, sex, and State of residence	2-12
2.6 Persons enrolled as of October 1, for hospital and medical insurance by age, for the United States, regions, and divisions, by metropolitan-non-metropolitan residence	2-24
2.7 Persons enrolled as of October 1, for hospital and medical insurance, by age, for States, by metropolitan-nonmetropolitan residence, and by county	2-26
2.8 Persons enrolled as of October 1, for hospital and medical insurance, by age, color, and sex, for population size groups of standard metropolitan statistical areas, and for each area of 500,000 population or more in 1960	2-112

The Enrolled Population

THIS REPORT presents data on the initial enrollment under the Medicare program and subsequent changes through the end of 1966. When the program went into effect on July 1 of that year, more than 19 million persons were entitled to hospital insurance (HI) benefits and 17.7 million had enrolled in the supplementary medical insurance (SMI) program. By October 1, the midpoint of the 6-month period covered by this report, these numbers were 19.2

million and 17.7 million, respectively. The tables show the distribution of these persons by age, color, and sex; by State and county of residence; and the number added to, and dropped from, the Medicare files through the end of 1966. The data were tabulated as of the October 1 midpoint primarily to provide a population base for Medicare utilization data that will be presented later in the Medicare statistics series.

Source of Data

When the Medicare program began, nearly all persons aged 65 and over were entitled to hospital insurance benefits. The exceptions were Federal employees, active or retired, who were covered or could have been covered under the provisions of the Federal Employees Health Benefits Act of 1959; aliens who had not met residence requirements; and persons convicted of certain specified crimes against the security of the United States. About 93 percent of those entitled to HI benefits also voluntarily enrolled under the SMI plan (for which retired Federal employees were also eligible).

About 90 percent of the persons entitled to HI benefits were receiving or were entitled to receive social security retirement benefits (table A). An additional 4 percent were receiving or entitled to receive railroad retirement benefits. Some 272,000 persons were entitled to both social security and railroad retirement cash benefits on the basis of earnings under both programs. These individuals are reported both as entitled to social security benefits and as entitled to railroad retirement benefits, but they are counted only once in the figures in table A for all enrolled persons. The remainder of the enrolled population consisted of resident aliens who had lived in the United States for at least 5 consecutive years, and of other aged individuals who were not eligible for cash benefits under either of the programs mentioned above.

The HIE master file.—The distribution of characteristics of the enrolled population shown in this report is based on the age, sex, color, and place of residence recorded in the health insurance entitlement (HIE) master file. Records for over 100,000 persons are added to this file each month, as shown

in table 2.2. Almost all of the additions to the file represent persons who have just attained age 65.

Because of the retroactive provision in hospital insurance coverage and special transitional provisions for the uninsured, additions to the HI rolls can also occur at ages other than 65 years. Coverage becomes effective on the first day of the month in which the individual attains age 65 or 12 months prior to the time he applies for coverage, whichever is later. If an eligible person fails to enroll for supplementary medical insurance during his initial enrollment period, he has the opportunity to do so in a general enrollment period. Because the first general enrollment period began on October 1, 1967, medical insurance data in table 2.2 reflect only initial enrollments. Coverage under the SMI program is not retroactive.

Terminations.—Normally, terminations in the HI program can occur only through death. A small additional number of terminations reported in table 2.3, however, may have resulted from initial entries for persons later found not to be entitled to coverage, to duplicate entries, and the like. Coverage is considered terminated with the beginning of the month following the month of death.

Notification of death may reach the HIE master file from the master beneficiary record, established for the operation of the social security system, or directly from information on a Medicare bill. Depending on the source of the information, there may be a considerable time lag between the date of death and the entry of the date into the file, with the likelihood that at the time table 2.3 was tabulated (December 1967) deaths recorded in the HIE master file for the latter part of 1966 were not yet all entered.

Terminations in the supplementary medical insurance program can arise through death, nonpayment of premiums, or withdrawal. The first period in which withdrawal was possible was during the 6-month general enrollment period that began on October 1, 1967. Thus the figures in table 2.3 represent terminations through death or nonpayment of premiums, as well as for the reasons cited above.

Place of residence.—"Place of residence" is defined as the mailing address of the insured person, as classified by State and county. Some persons use a bank or post office as their address. For others, a representative payee is empowered to receive their benefit checks, and this person may be at a different address than that of the beneficiary. In every case, the currently known mailing address—the only address kept in the HIE master file—is classified as the place of residence. The address in the file on the date of tabulation is used for all tables. Regardless of the place where the beneficiary was actually living or receiving medical service, all enroll-

ment and utilization records are assigned to the mailing address recorded in the file.

Residence unknown.—When the HIE master file was tabulated for October 1, 1966, it contained records for 17,000 persons with residence unknown. Most of these entries were the result of processing errors with respect to codes for States or foreign countries. An additional number of persons for whom county of residence was unknown appears in table 2.7 for each State. The latter records are reflections of mailing addresses from which the county could not be identified or possibly processing errors.

Color unknown.—When the file was established, information on color was not recorded centrally for 3.1 percent of the total population enrolled for hospital insurance. Numerically, social security beneficiaries represented the smallest number of unknowns—10,757 (table A). This figure is less than 0.1 percent of the social security total (table B). The proportion of unknowns among the railroad retire-

ment beneficiaries was greater, 4.2 percent, resulting chiefly from the procedures used to transcribe the eligibility data for this group.

Proportionately, the largest group with color unknown was the "other enrolled persons" category, where 550,000 records, or 21.4 percent of the total, did not contain this information. Information about the characteristics of these persons, who are not part of the social security or railroad retirement systems, may have been obtained through their applications for a social security number at the time it was requested by the Internal Revenue Service for income tax records. The form used for that purpose did not require a report of color. Other persons included in the "other enrolled persons" category applied for a social security number in the course of requesting Medicare coverage and no serious effort was made to record color during the enrollment process.

Tabulations from the HIE master file.—Information on utilization of medical services flows into the file daily. Routinely, about once a month, changes or corrections in characteristics of the beneficiaries, new enrollments, and terminations are entered. Tabulations of data prepared from the file reflect the number of persons and their characteristics as entered on the records for the reference date of the tabulation.

At the start of the Medicare program, it required a considerable length of time to reach and enroll the eligible persons. For example, the enrollment in the hospital insurance program as of July 1, 1966 recorded in the file in November 1966 was 18.9 million

Table B.—Percentage distribution of persons in the hospital insurance program, by type of entitlement, age, color, and sex, July 1, 1966

persons, but this figure had increased to 19.1 million when tabulations as of July 1, 1966 were made for this report in December 1967. It should be noted that data in the present report for October 1966 may be relatively less complete than those for July 1966, and additions and terminations may be increasingly less complete as the months referenced come closer to the date of tabulation.

Characteristics of the Enrolled Population

Hospital insurance program.—Comparatively few persons 65 years of age and over were excluded from coverage in the hospital insurance program. Essentially, then, the characteristics of the enrolled population corresponded quite closely to those of the total population of the United States, its territories and possessions in this age group. Given the methods used to identify and enroll persons for hospital insurance benefits, the data may understate the number of very aged persons, Negroes, and residents of rural areas in the population. The number of persons recorded in the HIE master file as covered under the hospital insurance program and residing in the United States actually exceeded by about 2 percent the Bureau of the Census population estimate for the aged for July 1, 1966.¹ The characteristics of the population aged 65 and over shown in this report are the age, sex, color, and place of residence recorded in the HIE master file and may therefore differ from Bureau of the Census estimates.

Of the 19 million persons in the HI program on October 1, 1966 (table 2.4), more than three-fifths

were under 75 years of age. Of these, the largest number (14 percent) were 65-66 years old, with smaller proportions recorded in successive age groups. Fifty-seven percent of the total population were women (figure 1). There were more women than men in every age group (table 2.5). White persons constituted 89.3 percent of the insured population; an additional 7.6 percent were recorded as nonwhite; and, for the remaining 3.1 percent, color

Table C.—Median age of persons in the hospital insurance program, by type of entitlement, color, and sex, July 1, 1966

¹ Current Population Reports, "Estimates of the Population of States by Age, 1965-67," P-25, No. 420, April 17, 1969.

had not been recorded. In each of the three subdivisions by color, women outnumbered men at every age. The imbalance was most pronounced among those whose color was "unknown," where there were four times as many women as men. The excess falls chiefly at ages 75 and above, where there were 310,000 women and 62,000 men.

Type of entitlement.—The characteristics of the population eligible for HI benefits as the program began differed somewhat by the source of their entitlement. Members of the railroad retirement population were slightly older, and contained a somewhat higher proportion of men and of reported nonwhites than did members of the social security population (tables B and C). The median ages of the two groups, at 72.2 and 72.7 years, respectively, differed by only half a year (table C). In contrast, among the "other enrolled persons," the median age was 77.7 years, and the ratio of women to men was 3 to 1. For 21 percent of the "other enrolled persons," color was not known; 12 percent were reported as nonwhite and 67 percent as white.

Geographic distribution.—When the population entitled to hospital insurance (table 2.4) is distributed

into the Bureau of Census regions and divisions, little geographic difference is noted between the proportion of men and women, or in the median age. Less than a year separated the lowest and highest median age by divisions—half the persons aged 65 and over in the West North Central States were over age 73.2, and half those in the South Atlantic States were over 72.5 years. Women comprise the majority of the population in every area, but their percentage distribution by age and geographic division is similar to that for men. Table D presents the percentage of population by color and sex for these areas. With respect to all older persons, the Middle Atlantic is the most populous division; among nonwhites, 61 percent reside in the three divisions that make up the South.

Almost two-thirds of the persons covered by hospital insurance reported their place of residence to be a metropolitan county (table 2.6). The proportion living in metropolitan counties showed considerable variation according to geographic area. The percentage of the population in each type of county is shown by division and region in table E. Relatively, the South shows the largest nonmetropolitan population and the Northeast the smallest.

Medical insurance.—The age, sex, color, and geographic distribution of the 17.7 million persons who enrolled voluntarily for supplementary medical insurance are essentially the same as those described for the hospital insurance program. However, the proportion of the HI population who elected to enroll for the supplementary program does vary slightly for these characteristics. What variation there was is reflected in table F, which shows that women are enrolled to the same extent as men, but that the participation among nonwhites, and among the population that did not report color, was substantially lower. Generally, the percent enrolled in each group at ages 65 and 66 was lower than that for the older age groups. The ratio was fairly level from ages 67 and 68 through age 79; then it dropped slightly at older ages. At ages 65 and 66, there may be many persons who are still working and who have medical insurance obtained in conjunction with their employment. At the end of the age span, the institutionalized population is at its maximum, which may diminish the need for insurance protection.

The differences noted in table F between white and nonwhite participation for the country as a whole are shown in table G by region and division. The gap appears in every area and is largest for the Mountain and West North Central States. These are areas of relatively small nonwhite populations—17,000 and 51,000, respectively—many members of which may not be Negroes. Conditions resulting in nonparticipation may differ considerably among the various segments of the nonwhite population.

Table F.—Percent of persons in the hospital insurance program participating in the medical insurance program, by age, color, and sex, October 1, 1966

The variation in the percent of persons with HI coverage who have enrolled for SMI protection according to the type of county of residence is quite small. As a whole, a slightly smaller proportion of residents of nonmetropolitan counties has elected to enroll (table H). Again, enrollment in each type of county is slightly less frequent for persons at ages 65 and 66, and at 80 years and over than in the ages in between.

These small differences are seen again by region (table H). In the Northeast, 95 percent of the persons covered for hospital insurance were also enrolled for SMI protection; in the South, the comparable figure was 92 percent.

Provisions of the Law

THE HEALTH INSURANCE program for the aged, commonly called Medicare, was enacted on July 30, 1965 as title XVIII of the Social Security Act, and became effective on July 1, 1966. The program, a part of the 1965 amendments (Public Law 89-97), makes

available two separate but coordinated insurance coverages—hospital insurance, covering nearly all persons aged 65 and over, and supplementary medical insurance, covering those persons in this age group who enroll voluntarily and pay the premium.

Hospital Insurance Program

The hospital insurance program (Part A of Medicare) pays for a large portion of the costs of hospital and related post-hospital services. It is financed on a self-supporting basis through a tax on a portion of current earnings, paid by employees, employers, and self-employed persons. The proceeds of this tax are placed in the Hospital Insurance Trust Fund, from which reimbursements for benefits and administrative expenses incurred under the program are paid. The trust fund is reimbursed from general tax revenues for the costs of providing coverage for persons who qualify for hospital insurance but who are not eligible for monthly social security or railroad retirement benefits.

BENEFITS

The program covers the cost of covered services in a participating hospital for up to 90 days in a "benefit period" (a period beginning with the first day of hospitalization and ending 60 days after discharge from a hospital or an extended care facility). Of the 90 days, full payment is made for the first 60 days of hospitalization after a deductible of \$40 has been paid. For each of the remaining 30 days in the benefit period, the patient pays a coinsurance amount of \$10 a day. The program provides the same benefits for services rendered in a nonparticipating hospital during a medical emergency.

Inpatient tuberculosis and psychiatric hospital services are also covered. However, there is a lifetime limit of 190 days of care in a psychiatric hospital. Where an individual is a patient in a tuberculosis or psychiatric hospital at the time he becomes entitled to hospital insurance, the number of days he was such an inpatient in the 90-day period immediately prior to his eligibility are counted against his 90 days of entitlement in that benefit period.

Covered hospital services include hospital room and board in accommodations containing from two to four beds, nursing services except for private-duty nursing, drugs and biologicals, and all those services ordinarily furnished by a hospital to its inpatients. Coverage under the hospital insurance program does not include the services of physicians (including radiologists, anesthesiologists, pathologists, and physiatrists) except for those services provided by interns or residents in training under approved teaching programs in a hospital.

The cost of the first three pints of blood furnished a patient during a benefit period is a deductible amount unless the patient arranges for replacement. Charges for any additional blood are covered under the program.

Outpatient hospital diagnostic benefits.—These benefits cover the cost of tests and related services that are ordinarily furnished by a participating hos-

pital to its outpatients for the purpose of diagnostic study. Such services are covered subject to a \$20 deductible and 20-percent coinsurance for diagnostic services furnished the beneficiary by the same hospital during a 20-day period.

Post-hospital home health care benefits.—These benefits cover the cost of visiting nurse services and

related home health services for as many as 100 visits in a year following the patient's discharge from a hospital or extended care facility, provided he has been confined for at least 3 days in a hospital. A home health plan must be developed by a physician and implemented within 14 days after the patient's discharge from the hospital or extended care facility.

Supplementary Medical Insurance Program

The supplementary medical insurance program (Part B of Medicare) provides coverage of physicians' services, additional home health services, and a variety of other health services. Individuals 65 years of age and over may enroll in the program regardless of whether they are eligible for social security retirement benefits. The insured's monthly premiums are matched by the Federal Government and paid into the Supplementary Medical Insurance Trust Fund, which reimburses carriers for benefits and administrative expenses incurred under the program.

BENEFITS

The SMI program pays for 80 percent of the allowed charges for physician services and other medical services after the patient has met a deductible of \$50 during a calendar year. The only dollar limit is that for treatment of mental illness outside a hospital, the maximum payment in any year, after the \$50 deductible has been met, being the lesser of \$250 or 50 percent of the allowed charges.

To preclude the possibility of having to meet a deductible twice in a short period of time, a "carry-over" provision was instituted. Accordingly, covered expenses that are incurred in the last quarter of the year and counted toward the deductible in that year are also credited toward the deductible for the fol-

lowing year.

Covered under the program are such benefits as physicians' services, including home, hospital, and office visits; services and supplies, including drugs and biologicals that cannot be self-administered, that are furnished as a part of a physician's professional service, most commonly in his office, and either rendered without charge or included in the physician's bills; diagnostic X-ray tests, diagnostic laboratory tests, and other diagnostic tests; X-ray, radium, and radioactive isotope therapy, including materials and the services of technicians; surgical dressings, splints, casts, and other devices used for reduction of fractures and dislocations; rental of durable medical equipment, including iron lungs, oxygen tents, hospital beds, and wheelchairs used in the patient's home (including an institution used as his home); ambulance service in cases where the use of other methods of transportation is contraindicated by the individual's condition; prosthetic devices (other than dental) that replace all or part of an internal organ, including replacement of such devices; leg, arm, back, and neck braces, and artificial legs, arms, eyes, including replacement if required because of a change in the patient's physical condition; and 100 home health visits during a calendar year—these visits being independent of those provided under the hospital insurance program.

Eligibility

The hospital insurance program.—Almost all persons aged 65 and over are eligible for benefits under the hospital insurance program. Included are those persons in this age group who are entitled to monthly social security cash benefits or payments from the railroad retirement system, regardless of whether they have applied for these cash benefits. During the period under consideration, a person was eligible for hospital insurance protection even though he did not qualify for either social security cash benefits or a railroad retirement annuity if (1) he had attained age 65 by July 1, 1966, (2) he would become 65 years of age before 1968, or (3) he would attain age 65 after 1967 with not less than 3 quarters of social security coverage, whenever acquired, for each calendar year elapsing after 1965 and before the year in which he would attain age 65; however, hospital insurance protection could not go into effect until the individual attained age 65. These three classes of

individuals were "deemed insured" under a special transitional provision.

Federal employees who retired from the Federal service after July 1, 1960, and who had the opportunity to be covered under the Federal Employees Health Benefits Act of 1959, are ineligible for hospital insurance benefits, as are aliens with less than 5 years of continuous residence in the United States, and those persons convicted of crimes against the security of the United States.

Hospital insurance protection can be retroactive for as many as 12 months from the time an individual files his application for enrollment. For example, an individual may apply 11 months after he attains age 65 and still be entitled to benefits from the month he attained age 65.

Supplementary medical insurance.—Persons entitled to benefits under the hospital insurance program (Part A) and retired Federal employees who

are not eligible for those benefits may voluntarily participate in the SMI program.

Enrollment.—An eligible person may enroll during the initial enrollment period, which begins with the third month preceding the one in which an individual attains age 65 and ends 3 months later, a total period of 7 months. If he enrolls during the 3 months prior to the month in which he attains age 65, his coverage is effective with the month in which he attains age 65; if he enrolls during the month he attains age 65, his coverage begins the following month; if he enrolls in any of the 3 months after he attains age 65, his coverage begins from 2 to 3 months after enrollment, depending on how long he waited before enrolling.

A *general* enrollment period was set between October 1 and December 31, 1967 for those who did not enroll in the regular enrollment period, with comparable periods set to occur in every odd-numbered year. A person who enrolls during a general enrollment period may receive benefits starting on the first of July following the general enrollment period. An eligible individual must enroll within 3 years after the close of the first enrollment period in which he was entitled to enroll in order to become a beneficiary.

An initial general enrollment period was set up

at the beginning of the program for people who had attained age 65 before March 1, 1966. This enrollment period began September 1, 1965, and ended on May 31, 1966, for coverage to begin with the initiation of the program on July 1, 1966.

A State may enroll otherwise eligible individuals who receive cash payments under public assistance programs if the State requests such a State-Federal enrollment agreement to be established and pays the necessary premiums.

Enrollment terminates with the beginning of the month following the month of death. In general, railroad retirement beneficiaries and individuals entitled to monthly cash social security benefits may terminate their enrollment earlier by notifying the Social Security Administration in writing during a general enrollment period of the desire to withdraw from the program. Other enrolled persons may terminate their coverage by withholding payment of premiums or by notifying the Social Security Administration in writing of the desire to withdraw from the program. An individual who previously has terminated his enrollment may re-enroll only in a general enrollment period beginning within 3 years of the date his previous enrollment had terminated. Re-enrollment, however, is allowed only once.

General Tables

Notes

Health insurance for the aged: The program, commonly known as Medicare, that pays for part of the costs of hospital and medical services for participating persons aged 65 and over.

Type of coverage.—The program provides two types of insurance: a basic hospital insurance plan (part A) and a voluntary supplementary medical insurance plan (part B).

Month coverage began: The first day of the month the individual becomes eligible for benefits.

Month coverage ended: The first day of the month following the effective date of termination.

Personal characteristics:

Age: In completed years at last birthday on the reference date of the table. A person is considered to have attained age 65 on the day preceding his 65th birthday.

Color: White, nonwhite, or unknown as entered into the HIE master file from basic records completed by the primary beneficiary. Color unknown, whether or not specifically indicated in a table, is included in the "all persons" or equivalent totals. Color is shown in States and in SMSAs with 10,000 or more nonwhite enrollees in the health insurance program on October 1, 1966, and is also shown for "location unknown."

Sex: As designated in the HIE master file.

Geographic classifications.—Based on the address to which the enrollee's cash benefit check is being mailed or the mailing address recorded in the HIE master file on December 29, 1967, regardless of the reference date of the table.

All areas: Consists of the United States, Guam, Puerto Rico, Virgin Islands, other outlying areas, and foreign countries.

United States: Consists of the 50 States, the District of Columbia, and residence unknown.

Other outlying areas: Consists of American Samoa, the Canal Zone, Canton Island, Caroline Islands, Mariana Islands, Marshall Islands, Midway Islands, and Wake Island.

County—The primary divisions of the 50 States are, in general, counties. In Louisiana, however, these divisions are known as parishes. Alaska is di-

vided into 21 economic areas, included here as the equivalent of counties. A number of cities that are independent of county organizations are reported separately in Maryland, Missouri, and Virginia. In Virginia, data are not shown separately for Lexington, which became independent of Rockbridge County on January 1, 1966. The divisions in Puerto Rico are called municipios.

County unknown.—Persons whose mailing address does not permit identification of county of residence are included in figures for States, but not in figures for metropolitan and nonmetropolitan counties, or for SMSAs, with one exception. Where there is only one type of county in a State, figures for county unknown are assigned to that type.

Metropolitan and nonmetropolitan counties.—The division of counties into metropolitan and nonmetropolitan groups is based on the list of standard metropolitan statistical areas (SMSA) as classified by the Bureau of the Budget.¹ Except in New England, each SMSA includes a county that contains a central city of at least 50,000 inhabitants. In addition, contiguous counties are included in the SMSA if they meet certain criteria of economic and social integration with the central city. In New England, an SMSA consists of towns and cities, rather than counties. However, the mailing address in the HIE master file is coded only for State and county. Therefore, for New England, the SMSA was replaced by the metropolitan State economic area, which is defined in terms of whole counties. Metropolitan counties are those counties that are included in an SMSA or a metropolitan State economic area. These counties are further divided into those with a central city and those without a central city. Nonmetropolitan counties are those that fall into neither an SMSA nor a metropolitan SEA.

SMSA, Metropolitan SEA.—See above. Only areas in the United States are listed.
